

A failure that no review would catch

Block-structured missingness

Three columns null on the SAME 955,371 rows (23.35% of the corpus)

An ordinary completeness rule

"RatecodeID must be present"
A reviewer approves it

A subpopulation is removed

Flex Fare trips deleted;
composition shift 0.236
in every condition

The model collapses to chance

ROC-AUC 0.869 -> 0.493
Same volume removed at
random costs 0.0004

Invisible in the schema. Invisible in a per-column census. Invisible in the rule text.
All 75 machine-authored gates removed 100% of the block.
